Abstract (en)

[origin: WO2005073654A1] The invention relates to a device for mutually fixing two heat exchangers (2,3) which respectively comprise a network consisting of tubes and ribs and collectors (4,5) or collecting tubes (10, 11) on both sides of the network, in addition to fixing means for mutual fixing. According to the invention, the tubes of the first heat exchanger (2) and the tubes (9) of the second heat exchanger (3) are arranged crosswise in relation to each other and the collectors (4,5) of the first heat exchanger (2) are offset by 90 DEG in relation to the collector tubes (10,11) of the second heat exchanger (3).
