Abstract (en)

[origin: WO2005073826A1] The invention relates to a system with at least one computer (1), comprising a security module (7), protected against unauthorised access, for the storage of secret data and for carrying out cryptographic operations and at least one portable data support (2), allocated to a user. The system is characterised in that a function for display of secret information, stored in the portable data support (2) known only to the user, in plain text by means of a display device (5) on the computer (1) is provided, whereby correct display of the plain text of the secret information only occurs when a given condition is met.
