Abstract (en)  
[origin: US2008280497A1] This connector part includes an insulating housing provided with a plurality of sockets for receiving a contact, which have a rear contact insertion end; a joint, which is provided with a plurality of cable passages corresponding to the sockets and which is placed in said housing behind the sockets; and a cable-guiding grid, which is fixed in the housing behind the joint, supporting the latter, said grid being provided with a plurality of cable passages corresponding to the sockets. It also includes a member for blocking the passages of the grid, which is fixed on said grid and is designed for being pierced selectively for the insertion of contacts into a predetermined group of sockets. The invention also relates to a piercing tool, which is designed for being used with one such connector part, and to a corresponding wiring method.
