Abstract (en)
[origin: FR2866168A1] The process involves generating a public key in a mobile communication terminal (10), and acquiring the key using a telecommunication network entity (20) from the terminal via a communication network. The terminal is authenticated by the entity by utilizing a speaker authentication process. The key is provided to a certification server (30) based on the result of the authentication process. An independent claim is also included for a mobile telecommunication system having a mobile communication terminal and a network entity.
