Abstract (en)

The Feeder of concrete armature assembling machine consists of the columns for the straight iron rod (2) which have the ability for free opening-closing and forward-backward movement. Each column (2) bears at its upper and lower part group of rolls for straightening and propulsion of the iron rod (5). The group of rolls (5) is adjusted at the transferor with the regulating base-guide of the straight rod (18) and (17). At the front part, the rotating feeder (26) is placed for the feeding of the assembling machines (41) with formed shapes. At the bottom part of the feeder (26), joint (16) for its rotation and the continuous feeding of the assembling machines is adjusted and fastens at positions every 90°. The feeding of the machine is accomplished manually or via a mechanism of automatic feeding (34).
