Abstract (en)

An apparatus for printing isolated packaging elements (11) comprises a conveyor (10) comprising a plurality of transportation segments (15), wherein the isolated packaging elements (11) are maintained in a stock (21). A feeder (20) is provided to transfer at least one isolated packaging element (11) from the stock (21) on one transportation segment (15), wherein each isolated packaging element (11) is held fast on the corresponding transportation segment (15) through a holding element associated to said transportation segment (15). At least one drive (26) is connected with the conveyor (10) to move the conveyor (10). A print module (40) is provided above the transportation segments (15) to print, on the isolated packaging element (11), the sides (12, 13) opposite to the surface oriented towards the transportation segment (15).
