Abstract (en)
[origin: EP1714902A1] The package has side surfaces extending between front and rear surfaces, where surfaces are formed by a tube. A bottom side closure is formed by convolution, adhesion and/or sealing of the tube at an end to form a bag. A head side closure has bag rims (61, 62) arranged in the extensions of the side surfaces. The rims are so long that it can be joined in bow shape such that a dome-shaped closure (60) is formed on the head side. An independent claim is also included for a method for creating a package.
