Abstract (en)  
The device for the manufacture of a fibrous material web (5), with a first (1) and a second (2) impingement drying arrangement, has for the second impingement drying arrangement at least one long drying line (11) which is at least approximately vertical, and at least one second blast hood (13) installed on the side next to the drying line and directed towards it. The two impingement drying arrangements follow directly one after the other. The first impingement drying arrangement is located before the second impingement drying arrangement. An independent claim is included for a method for the manufacture of a fibrous material web by application of the device according to the invention, in which the web is dried by means of a first and a second impingement drying arrangement.
