Abstract (en)  
[origin: EP1715120A2] The lock has a tumbler packet actuated by a double-bit key, where the lock and/or the key include mechanical codings (3) arranged in an insertion direction of the key. The coding enables an insertion of the key into the lock under the precondition of correspondence of the codings of the key and lock to authorized locking group. The coding (3) is integrated in a keyhole (5) and has a pattern.
