Abstract (en)

[origin: EP1715125A2] The shear has a locking groove into which a locking pin (21) intervenes in closing and rotating positions of a wing to fix a display rod (12) in a parallel position to a shielding rail, where the swiveling of the rod is made opposite to the rail. The pin fixes a tiltability of the rod in a position corresponding to a ventilation gap position of the wing and slightly deviating from the parallel position to the shielding rail by units.
