Abstract (en)
The engine has an injection system (2), which is arranged in the inner region of a cylinder head (1) i.e. between a oil chamber (4) of the head and intake channels (3), such that the injection system is quasi integrated in the head. The injection system is connected with a hood. The hood is connected with intake channels, so that these serve for intake air guidance, where the channels are manufactured as one piece with the head.
