Abstract (en)
[origin: EP1715401A1] The switch has an operating body (3) that cooperates with rotating and swiveling units over a torsional coupler (7) in such a manner that the units and their masses are decoupled from one another. A rotating-swiveling-actuator is flexibly or rigidly coupled with the units over the coupler for an associated switching unit. A handle is arranged on a side of an axle of the operating body, where the side is turned away to coupler.
