Abstract (en)

[origin: DE102004008829A1] Device for cleaning a hollow vessel (6) comprises a cleaning head (2) made from a loop (3) of elastic material coated with cleaning material and extending in the retractable direction. The cleaning head bends outwardly on the base of the vessel when it is pushed into it. The cleaning head fits the contours of the base and walls of the vessel. Preferred Features: The hoop is made from a flat plastic strip (4) which is joined to a cleaning material. The cleaning material has textile fibers (5) on the outer side.
