Abstract (en)
[origin: FR2865940A1] The device has an optical waveguide (40) for allowing the light to pass through an input of a stylet (50) for projecting a light beam on living tissues. A quarter wave-plate (571) filters the light at an output of a polarizer (572) to obtain clockwise or anticlockwise polarized light. An iris (53) is provided at an output of the plate and is rotated by a bolt.
