Abstract (en)

[origin: WO2005077466A2] In Fig. (1) it is possible to see a simplified drawing of a football pitch (1) and two goals (2 and 3) which are located at opposite ends of the playing field (1). The device for carrying out the inventive method comprises two sets (6, 7) of radar sensors (5), whereby one of said set of sensors is respectively arranged in the region of one of the goals (2,3) of each half (1). The sensors (5) of each respective set (6, 7) are connected to a data concentrator (8) which combines signals received from individual sensors to form one or several signals before said signals are forwarded to a computer (9). The computer (9) then forwards the processed signals in the form of video signals to a video mixing desk or directly to a large display (10) such as those which are often installed in stadiums.
