Abstract (en)

[origin: WO2005082548A2] The invention relates to an arrangement and a method for coating a thread-type material (12) with paint, using a transport path (10) for the continuous transport of the thread-type material (12). For the multiple coating, a heatable thermosetting station (14) for thermosetting a layer of paint containing a solvent is combined with a UV drying station (16) arranged upstream and/or downstream of the thermosetting station and used for the UV radiation drying of a solvent-free layer of paint applied to the thread-type material (12).
