Abstract (en)

[origin: WO2005075116A1] A system for sorting postal articles includes a plurality of postal article feeders (2, 4). A delay line (18) receives postal articles from one of the feeders (2, 4), and a delivery line (16) receives postal articles from another of the feeders (2, 4). Each one of a plurality of towers (10, 12, 14) has a plurality of destination compartments (20) arranged to receive the postal articles from the delay line (18) and the delivery line (16). The destination compartments (20) move laterally with respect to the towers (10, 12, 14). A plurality of trays (24, 26) receives the postal articles from the delivery and delay lines (16, 18) and delivers the postal articles to select destination compartments (20).
