Abstract (en)
[origin: WO2005077631A1] The invention relates to a method for producing cambered, tubular products, especially pneumatic springs, from a tubular section (10) that is internally subjected to a force of pressure and is pressed against a vulcanising mould (30). The invention also relates to a device for carrying out said method. The aim of the invention is to provide an economical method which is reliable in terms of the process, and a corresponding device. To this end, a heated fluid is introduced directly into the tubular section (10), and the tubular section (10) is pressed against the vulcanising mould (30).
