Abstract (en)

[origin: WO2005080216A1] A plastic closure includes a plastic closure shell (28 or 78) having a base wall (34 or 86) with a central opening (42) and a skirt (36 or 80) with at least one internal thread or bead for securing the closure to a container finish. A plastic disk (30 or 30a or 30b or 30c or 30d or 84) is retained within the shell parallel to but spaced from the base wall. The disk includes a plurality of axially extending spacer elements (46, 48 or 46b) around the disk to engage the undersurface of the base wall and space the disk from the base wall of the shell, and angularly spaced fingers (50) extending from the disk through the central opening of the base wall to retain the disk within the shell. A resilient liner (32 or 32c or 32d or 88) is disposed on an underside of the disk for sealing engagement with the container finish.
