Abstract (en)

[origin: WO2005082753A1] Conventionally, winding machines are used for winding thin films, in particular, thin aluminium films, which comprise a contact roller (21), resting on the periphery of the winding roller under pressure during winding. According to the invention, the contact roller is fixed in position during winding and the winding roller (22) is mounted pressed away from the contact roller (21) against an inelastic counter-force.
