Abstract (en)

[origin: WO2005078226A1] The invention relates to a door with a rotatably mounted door leaf, which may be operated by a floor door closer, arranged below the door, whereby the door leaf is embodied with at least two parallel glass panes, a peripheral spacer between the glass panes and a support element arranged between the glass panes in the lower region of the door leaf. According to the invention, such a door may be improved, in particular with regard to the pivot mounting thereof, whereby the support element (4) between the glass panes (1, 2) may be connected to a support (5), lying on the outside of the glass panes (1, 2), which may engage with a drive axle of the floor door closer (8), outside the plane of the door.
