Abstract (en)

[origin: EP1542108A1] The method involves detecting a number of operating signals of the technical device (1), forming the mean (15) of at least some of the signals, forming a normalized signal (17,171) for at least one operating signal containing deviation of a current value of the operating signal from the mean value and comparing the normalized signal with a reference value range (35) of the relevant operating signal. .
