Abstract (en)

[origin: WO2006051104A1] The invention relates to a method for transmitting a message (N) from a first communications device (EG1) to at least one second communications device (EG2). The inventive method comprises the following steps: a) adjusting, on the first communications device (EG1), an exceptional call mode, i.e. a mode in which incoming calls cannot be accepted in a conventional manner; b) receiving a voice connection (A) by means of the first communications device (EG1); c) storing, in the first communications device (EG1), an identification information, e.g. a call number of EG2, for the call (A); d) actuating a button (T) of the first communications device (EG1) which is associated with a message (previously recorded voice message, SMS); e) transmitting a message (N) from the first communications device (EG1) to the at least one second communications device (EG2); f) displaying the identification data for the voice connection (A) once the first communications device (EG1) has been switched to a normal call mode.
