Abstract (en)  
[origin: EP1717057A2] The pad has a sheet stack, whose sheets have a marginal perforation (4) in the area of the sheet back. The sheets are connected with one another by ring loops of a binding agent, which intersperses the perforation, and have perforation lines running parallel to the back. The perforation has punched holes (9) with a side that is averted to the back. The holes are implemented in triangular form, such that the side coincides with the lines.
