Abstract (en)
[origin: EP1717178A2] The machine has a winding roller (4) forming a winding gap with a bearing drum, which is arranged axially parallel to the winding roller. A cover (9) is provided to acoustically shield the winding roller, during the winding process, where the cover is partially opened. The cover has two wall units (10, 11) and a cover unit (12), where the unit (10) is designed in a detachable, movable and foldable manner for pushing the roller from the machine.
