Abstract (en)  
[origin: EP1717373A2] The water power plant unit comprises a power plant supply (1) with at least one drive water channel (3) and at least one drainage water channel (5) which has an open end and a shut end shutting disc (6). There is a fluid channel (7) located in the region of the bottom of the power plant supply which has at least one exit opening (8) via which a low pressure fluid (12) is dischargeable. The fluid channel is arranged perpendicular to the flow direction and extends over the power plant supply in a direction perpendicular to the shutting disc. Several fluid channels may have different lengths, be arranged in spaced apart and run parallel to one another.
