Abstract (en)

It comprises a laminar body (10) that has a base sheet (1) suitable for being releasably attached to a support surface, various housings (4) for releasably housing respective sheet-like indicators (5), and a transparent sheet (3) covering said housing. The laminar body (10) has openings (7a, 7b) associated with corresponding elements linked to the support surface, and the housings (4) are in positions adjacent to the openings (7a, 7b), so that, when placing the laminar body (10) on the support surface, the housings (4) are placed respectively adjacent to the elements linked to the support surface, and each indicator (5) housed in each housing (4) is associated with one of said elements.
