Abstract (en)  
[origin: WO2005077693A1] The invention relates to a roof structure (20) for a vehicle (10), having a rear roof part (24) which contains a vehicle rear light (26), lateral, rear supports (27), in addition to a rear section (25) of the vehicle roof and said roof structure is displaceably mounted in a longitudinal direction of the vehicle (B). Also, comprising a front roof part (22) which can be applied in an adjacent manner in relation to a windscreen frame (11) of the vehicle and said front roof part can be removed from the roof structure (20) and the measurements thereof in the longitudinal direction of the vehicle correspond to the displacement path of the rear roof part (24). Subsequently, the roof structure comprises rear, lateral element (28) which can be applied in an adjacent manner in relation to the rear roof part (24) and can be removed from the roof structure (20) and the measurements thereof in the longitudinal direction of the vehicle correspond to the displacement path of the rear roof part.
