Abstract (en)

[origin: WO2005080126A1] The invention relates to a land, air or sea vehicle comprising a transport compartment for receiving cargo and/or seats that are mounted in the vehicle for conveying personnel, at least one row of seats, which are arranged next to one another along the longitudinal axis of the vehicle and are transversal to the displacement direction of the vehicle, being provided in a central row of the transport compartment. Said vehicle is characterised in that a mesh framework (40) is suspended in the transport compartment for fixing the seats, each mesh framework (40) consisting of two transversal straps (15), separated by a seat width and stretched between the lateral walls (11) in the proximity of the roof and two vertical straps (18), separated by a seat width and stretched between the roof (12) and the floor (13). The transversal straps (15) and the vertical straps (18) are interconnected at their intersection points (19).
