Abstract (en)  
[origin: WO2005082996A1] The invention relates to a cross-linked composition comprising at least one elastomer and at least one triblock sequenced copolymer. The invention also relates to a method for obtaining one such composition, based on a system and a suitably selected cross-linking temperature. According to a preferred embodiment of the invention, the cross-linked composition can be transformed as a thermoplastic material. The inventive composition can be used in various applications, especially for producing conduits for the transfer of fluids, seals and insulation linings.
