Abstract (en)

[origin: WO2005083195A1] Disclosed is a covering device for floorings (2), comprising a profiled cover (4) that is provided with a covering flange (6) and at least one clamping web (7) which protrudes downward from the covering flange (6), extends in the longitudinal direction of the profiled cover (4), and is used for fastening the profiled cover (4) in a fixture (9), and an optionally useable compensating strip (5). Said compensating strip (5) can be positively joined to the profiled cover (4) on the bottom face of the covering flange (6) via a groove-spring connection. In order to create advantageous design conditions, the profiled cover (4), which is formed from a profiled bar, is provided with at least one longitudinal groove (14) for accommodating a locking nose (15) of the compensating strip (5), which is also formed from a profiled bar, as a groove-spring connection.
