Abstract (en)

[origin: US2005198306A1] A system for accessing at least one Virtual Private Network (VPN) includes a terminal, and can include at least one Security Policy Database (SPD). The terminal is capable of communicating with a VPN client and at least one application. The VPN client, in turn, is capable of defining at least one VPN access point, each VPN access point including an associated physical access point and VPN policy. Thereafter, the VPN client can access at least one VPN based upon the VPN access point(s) to thereby establish at least one data connection from at least one application across the at least one VPN. In addition, the VPN client can be capable of downloading at least one VPN policy from the SPD. A system for managing at least one Virtual Private Network (VPN) policy is also provided, where the VPN polic(ies) are for use in accessing at least one VPN.
