Abstract (en)
[origin: WO2005091632A1] The present invention relates to a method for transmitting video information (fig. 5), in which a bitstream (510,520) is formed comprising a set of frames (512,513,515,516,518 and 522,523,525 and 528) comprising macroblocks. At least one switching frame (524) is formed into the bitstream and macroblocks of the switching frame are arranged into a first and a second group of macroblocks, each macroblock of the first group are encoded by a first encoding method (fig. 5, intra) to provide a switching point for continuing the transmission of video information with another bitstream formed from the video information.
