Abstract (en)

The invention relates to a method and a stretching device for stretching a gauze (10) for use in screen printing, wherein the gauze comprises a first pair (11) and a second pair (12) of opposed sides, which define an inner area (13) of the gauze. The first pair and the second pair of sides of the gauze are tensioned before the inner area is tensioned. Consequently, the warp and weft threads of the gauze (10) are oriented substantially at right angles relative to each other in said inner area (13).
