Abstract (en)

A moving gangway (1) for a boat comprises at least one gangway element (2, 3), defining a passage surface (P) for the transit of persons, and a support structure (10), which can be assembled fixedly to the boat. The gangway element is assembled to the support structure in such a way as to be able to move. The gangway comprises connection levers (21, 22, 23, 24) which can connect the gangway element to the support structure in such a way that the gangway element can move along a translational path (V) substantially perpendicular to the passage surface.
