Abstract (en)

[origin: EP1719711A1] A container for transporting goods consisting of a lower base (1), two small panels (2) and two large panels (3). The small panels (2) are provided with first connection means consisting of a plurality of projections arranged in extension of both side edges of said small panel (2), perpendicular thereto, aligned in two parallel rows, defining a first group of projections (4) and a second group of projections (4'), and the large panels (3) are provided with second connection means consisting of two parallel grooves, a first groove (5) and a second groove (6), arranged on the inner face of the large panels (3) close to their side edges. The projections (4) constituting the first group of projections are accommodated with the ability to slide over the first groove (5) and projections (4') of the second group of projections are accommodated with the ability to slide over the second groove (6).
