Abstract (en)
[origin: EP1719861A2] The cylinder lock (52) has an interior (10) and an exterior (12) actuation shafts and a closing element (14) arranged between them. The closing element is connected to a rotary case (16) around the axis of rotation of actuation shafts (10, 12). The actuation shafts have a cavity (48) and a coupling element (32) which is torque proof inserted and axially adjustable in the case. The coupling element can be moved by an electric motor (56) between three different positions such as position I, position A, and position K.
