Abstract (en)

[origin: EP1720222A2] A housing made from an electrically insulating material includes an inserting section (9) for placing into an inserting chamber (3) of a counter plug connector (2), a receiving chamber (12) for a ferrite element and depressing openings for contact pins (4). A lockable open housing section (10) includes a first retainer for each of the contacts (28) and having a cover (11) fixed to a connecting section (30), and a second retainer for holding the conductor (7) of a cable (6). The two contacts have contact bush sections (29) each with an outer surface (29b) connected to a contact pin of the counter plug connector. The connecting section connects the contact bush section with the connection section (32) to which the conductor of the cable is connected. A ferrite element is arranged in two through holes formed in the contact bush section.
