Abstract (en)
[origin: WO2006098543A1] The present invention relates to a cosmetic container, wherein a proper amount of a liquid cosmetic is dispensed to a brush and then used by opening an outlet through separation of an outer cap and subsequent rise of a lift cap when a user applies make-up by dispensing the liquid cosmetic contained in the cosmetic container and the outflow of the liquid cosmetic is shut off by closing the outlet through coupling of the outer cap and subsequent lowering of the lift cap after the use of the liquid cosmetic. A cosmetic container of the present invention comprises a container body that has a mouth formed at a side thereof and a receiving portion filled with a liquid cosmetic through the mouth; a lower cap that is threadly engaged with the mouth of the container body and has a central hole in which a packing body formed with an opening hole at a side of a lower end thereof to provide an outflow passage for the liquid cosmetic and with an opening/closing protrusion protruding from the center thereof is inserted and coupled; a lift cap that is supported on and coupled to the lower cap by means of a spring such that the lift cap can be raised and lowered, is inserted into a space of the packing body such that the opening/closing protrusion of the packing body can escape or be inserted into a lower end of an axial tube when the lift cap is raised or lowered to open or close the outflow passage, and has a brush formed at an upper portion of the axial tube; and an outer cap that is threadly engaged with an upper portion of the lower cap to protect the brush when the lift cap is lowered and fixed.
