Abstract (en)

[origin: WO2005084849A1] During a method for transferring springs (F) into holding means of an assembler, the springs (F) are arranged one behind the other in a row and are delivered in a direction of conveyance by means of a spring conveyor (4, 5) and are transferred in groups into the holding means of the assembler. The spring conveyor (4, 5) conveys the springs (F) into the assembler. They are then displaced perpendicular to the direction of conveyance by means of a sliding bar (16) integrated in the assembler.
