Abstract (en)

[origin: WO2005082756A2] The invention relates to a folding device for folding printed products, comprising a folding table wherein a folding gap is formed, and a folding blade which can be displaced up and down and which is maintained above the folding gap on a frame, said folding blade being pressed into a printed product in the folding gap, said printed product being arranged on the folding table, and said frame can be displaced. [origin: WO2005082756A2] A folding assembly for printed paper has a folding table with a gap for a blade that rises and falls from above the frame. The blade engages with the paper and forces it through the gap. The table frame may be moved to remove blockages.
