Abstract (en)
[origin: WO2005080418A2] There are provided multimeric fusion proteins exhibiting anti-viral activity. The fusion proteins comprise the HR2 region of the ectodomain of the human immunodeficiency virus gp41 protein which is fused to a multimerisation domain peptide such as a trimerisation domain derived from tetranectin. The multimerised fusion proteins may be used as HIV fusion inhibitors in the treatment of AIDS.
