Abstract (en)

[origin: WO2005085696A1] The invention relates to a pipe kit for a channel pipeline (1), made of several plastic pipes (2) having a circular cross-section. A plastic shaft base body (5) which is arranged between respectively two pipes (2), has a central connection section (12). The connection section (12) comprises a base (16) provided with a support surface (17) and a connection element (18) for a shaft (9), which is diametrical to the base. Pipe sections (13), which are used to connect to the pipes (2), are embodied on both sides of the connection section (12). The diameter (d) of the shaft (9) is visibly smaller than the diameter (D) of the shaft base body.
