Abstract (en)

[origin: WO2005069720A2] The invention especially relates to a method for producing a graphic user and/or display surface on a display for a man/machine interface of a motor vehicle, whereby the user surface (100, 200, 300, 400, 500, 600, 700) comprises graphic elements (101, 201, 301, 401, 501, 601, 701) that are arranged in a menu-type manner. The aim of the invention is to provide an improved method for producing graphic user and/or display surfaces. According to the invention, a main group and at least one subgroup below said main group is produced and every graphic element (101, 201, 301, 401, 501, 601, 701) is associated with the main group, for example the domain "com.bmw" or one of the subgroups, for example "com.bmw.entertainment", "com.bmw.entertainment.cd" or "com.bmw.entertainment.radio", and the main group and the at least one subgroup indicate respective properties of the graphic elements associated therewith, for example their color. A graphic element of a subgroup has, in addition to the properties indicated in the subgroup, at least for the most part also the properties indicated in the main group.
