Abstract (en)

[origin: WO2005116850A2] Novel markers for ovarian cancer that are both sensitive and accurate. These markers are overexpressed and/or differentially expressed in ovarian cancer specifically, as opposed to normal ovarian tissue. The measurement of these markers, alone or in combination, in patient samples provides information that the diagnostician can correlate with a probable diagnosis, in ovarian cancer. The markers of the present invention, alone or in combination, show a high degree of differential detection between ovarian cancer and non-cancerous states.
