Abstract (en)

[origin: FR2867343A1] The method involves automatically establishing a sequence of images from image data of a captured image, and dynamically displaying the image sequence on a display of a digital camera (12). The data relative to the sequence is transmitted, in response to the control of a user, to a dynamic proof production equipment at a lenticular network, to produce a proof at the lenticular network. An independent claim is also included for a digital capturing apparatus to implement an image processing method.
