Abstract (en)
[origin: WO2005083995A1] A personal call management system allows a user to specify how incoming telephone calls should be handled. The user can specify various parameters including modes, filters, schedules, and the like. Incoming calls are routed to a specified telephone number, or sent to voicemail, or otherwise disposed of. Users can change modes manually or can specify automatic mode selection based on time of date, day of week, location, and/or other factors.
