Abstract (en)

The container (10) has an application unit (11), engaged in a tubular storage unit (12), supported on a sheath (15) slidingly connected to the unit (12) by an elastically compressible device (16) with minimum and maximum axial withdrawal configurations. A transversal side (11A) of the unit (11) flushes an annular end (12B) of the unit (12) in the minimum withdrawal configuration. The side (11A) is in a projection relative to the end (12B), at a distance greater than the axial sinking course of the device (16) in the maximum withdrawal configuration.
