Abstract (en)

The guide has a middle rail (11) movably guided opposite to a body rail and a pull-out rail (13) guided opposite to the middle rail. A vertical bar (23) of the pull-out rail is projected into a part of a longitudinal extension of the pull-out rail between side pieces (20, 21) of the middle rail. An attachment roller (37) is rotatably supported for synchronously guiding the middle rail during pulling-out of a tall cupboard part from a tall cupboard body at one of the side pieces. The roller is rolled-up in a path at one of the side pieces and in another path at the bar. An independent claim is also included for a tall cupboard pull-out comprising a side guide.
