Abstract (en)

[origin: EP1721708A2] The device is assembled of a pulling spindle with a pulling nut, a pressure element, and a support element (1) concentrically positioned at the housing during the pulling process. The support element (1) is provided with a cylindrical guide element (2) extending from its rear end and matching the shape and size of the inner ring of the wheel bearing. A centering step (3) facilitates the concentric positioning. A threaded area (5) can be used for joining a supporting adapter element.
